Mathematical Induction Template

Base Case: (Show that the result is true for n = 0.)

Inductive Step: Assume that the result is true for n = k. Consider the case where n = k + 1. (Manipulate one of the expressions involved so that you can apply the *inductive hypothesis* to establish the truth of the result for n = k + 1.)

•

(Concluding Remarks) Since we have shown that

1. The result is true for n = 0.

2. If the result is true for n = k, then the result is true for n = k + 1.

It follows by the principle of mathematical induction that the result is true for all $n \in \mathbb{N}$.
